IMAGE COMPRESSION METHODOLOGIES - Shodhganga

Image compression research aims at reducing the numbers of bits needed to represent an image by removing the spatial and spectral redundancies as much as possible [2][4] Data redundancy is a central issue in digital image compression It is not an abstract concept but a mathematically quantifiable entity

Image De-noising by Various Filters for Different Noise

Image processing is basically the use of computer algorithms to perform image processing on digital images Digital image processing is a part of digital signal processing Digital image processing has many significant advantages over analog image processing Image processing allows a much wider range of

Brain Tumor Detection Using Image Processing.

Such noise reduction is a typical pre-processing step to improve the results of later processing (for example, edge detection on an image) Median filtering is very widely used in digital image processing because, under certain conditions, it preserves edges while removing noise E Threshold Segmentation:

ANALYSIS OF PLANT DISEASES USING IMAGE PROCESSING ...

Image Preprocessing refers to functioning on images in order to convert it in a proper form on which the algorithm can be worked. The captured images will be cropped and be resized so that it can be successfully tested. In Digital image processing, computer algorithms are applied to do image processing on digital images.
